

JIMMY'S LAWN AND LANDSCAPING
53 KNORR ROAD
MONROE, CT 06468
(203) 268-4959

Thank you for choosing Jimmy's Lawn for your 2017 fertilizing needs. We offer several programs so we can better suit your individual needs. We ask that you check off the appropriate boxes, sign and return the complete form as soon as possible. Thank you.

LAWNS

• **PROGRAM # 1**

\$ _____

This program would consist of four applications of a high quality granular fertilizer. No chemicals to control crabgrass, weeds or insects etc. This program would be the least expensive initially but could lead to costly problems down the road from pest damage.

• **PROGRAM # 2**

\$ _____

This program consists of four applications of the same high quality fertilizer, mixed with crabgrass and insect control. These chemicals are all registered with the State of CT and are used in very small amounts. This reduces the possible need for much stronger chemicals and re-seeding when a problem occurs. This would also include a modest amount of post emergent weed control.

• *****PROGRAM # 3*****

\$ _____

This program consists of five applications similar with program 2. The fifth application during the year would let the applications be applied at better time intervals. Timing is crucial for the chemicals to do the best job controlling pests. During several of the applications, an application of post-emergent weed control would be applied to help controls weeds in the turf areas.

SHRUBS

• **PROGRAM # 4**

call for price \$ _____

Protect your investment! This program would consist of one application of fertilizer to your plants, which will help keep them healthy and resist diseases. The plants would also be sprayed for insect control 2 times during the season and checked for other problems.

Other services that can be combined with any program at an additional cost are:

- Tick Control - Call for details, depends on ground covers, woods, etc.
- Deer Control - 2 applications of a non-toxic deer repellent to shrubs. (Repels by taste.)
- Property Sprays to help prevent and control pests.
- Over seeding to help thicken your lawn
- Core aerating
- Spraying of poison ivy when detected.
- Spraying of unsightly weeds growing in drives etc.
- Controlling of fungus when detected.

(OVER PLEASE)

- Programs 2 & 3 include Pendimethyln or Dimension for crabgrass and Allectus, which contains both Merit for grub control and Talstar for surface insects. If you have any questions concerning these chemicals, please call.
- The main difference between program 2 & 3 is that we will focus more on post emergent weed control and bentgrass with program 3.

The following is a fertilizing contract for the 2017 season. **It must be signed and returned as soon as possible.**

Name _____

Address _____

City _____ Zip _____

Phone Daytime _____ Evenings _____

By signing below, I hereby authorize Jimmy's Lawn and Landscaping to fertilize my lawn for the 2017 season. I would like Program # ____ & ____ to best suit my needs.

_____ I am concerned about lawn fungus. Please make applications of fungicide as needed. I understand there is an extra cost.

All fertilizer must be watered in by homeowner for chemical to work effectively. All Applications for fungus etc. are an additional cost Please note if you want preventative applications to help resist fungal damage.

All lawns are limed, at an additional cost, with pelletized lime at the time of the 1st application unless requested not to. (Liming helps the grass use the fertilizer more efficiently.)

Customer Signature _____ Date ____/____/2017
